

# CLEARGISTIX—DATA GUMBO VALUE TOGETHER

Connect the Field to the Office and Connect the Office to  
The Contract Automation

## INTRODUCTION

Cleargistix is a cloud-based Digital Field Ticketing Solution that allows service companies to digitally capture revenue, safety, inspection, payroll, and other information in the field and track this information through every step in the review, approval, and reporting process.

Data Gumbo's GumboNet™ creates a network of smart contracts connecting operators and service providers together in a touchless transactional blockchain-based network that eliminates manual systems, redundant middleware and paper invoices. Payments are calculated based on contractual terms and field data.

Together, these systems digitize and streamline field data and related processes and carry the captured data through to all of the appropriate “back-end” systems including financial and accounting, supply chain, procurement, ERPs, payment systems, business intelligence systems, payroll systems and others. No paper, no manual reconciling, no human data entry, complete transparency, complete transactional certainty, real time view of operations and double-digit transformational savings.

## BENEFITS OF COLLABORATION

Cleargistix streamlines field information workflows and business processes, connecting your office to your field assets, instantly. Data Gumbo takes the field information and applies it automatically to the contract, generating pre-reconciled payments. Together, your data is transformed from a stack of paper or a complex spreadsheet to a real time picture of your operations.

Realize fast time through value resulting from a decrease in billing errors, a reduction in data entry and review staffing, a reduction of disputes that create significant rework costs including lawsuits, better management of field activities due to more accurate and timely information, and many other costs and inefficiencies.

All of this is possible without any purchase of hardware or dedicated staff, freeing up the operators and service companies to focus on enhancing their business and not their IT infrastructure.

## OVERVIEW

### Paper IS the Problem

No more paper, including scans of paper

### Cloud-Based Digital Field Ticketing

Capture field and sensor data at all pickup and drop-off sites

### Digital, Fast and Accurate

All aspects of transactions processed digitally with full audit capability

### Smart Contract Enforcement

Guarantees only agreed upon pricing is applied

### NO Invoices

Generate pre-approved payments based upon contract terms with price book and field data and measurements

### Trust Between All Parties

Enhancing the level of trust and collaboration between operators and suppliers

### Full Transparency with All Transactions Recorded

Both sides get complete record of who, what, where, when and how of field activities
